

Sprint 1 Report Share Yourself Artists Web Team 04/21/19

Actions to Stop Doing

We should be on time to TA meetings and SCRUM meetings, although for the most part every body makes it there, so this is a minor problem. During the meetings, we may not have a strict agenda to follow so we may go off topic and not efficiently use our meeting times. When introducing the user stories during meetings we must be ready to show the code we worked on, as requested by the TA.

Actions to Start Doing

We have to create the burn-up chart, which we have not done yet. We should also test our functions towards the end of our sprint, which we really need in order to make the code production level ready. We need to meet with Scott to discuss our release plan as soon as possible. We probably should make an effort to make some comments to code so when others use it they are not completely lost on the functionality of it. We could also check each other's code with pull requests.

Actions to Keep Doing

We should continue to communicate with one another, which we have been doing really well. We should continue to coordinate extra meeting times as everyone seems to be able to work with the proposed times. Therefore, we should continue these group meeting times which increases our productivity as we can code together and discuss further plans. We should continue linking each other helpful resources, in order for us to learn the necessary skills cohesively. We also need to continue to pair program whenever it is needed so that we can finish tasks/ user stories more efficiently when previous user stories have been completed. We will also continue to meet, plan, and code together with difficult functionalities, which includes the recommendation system. We also merged some branches separately, which saved time merging everything at meetings.

Work completed/not completed

Completed:

- We have decided on Jasmine as a testing framework
- The page to view art has been improved a lot
- Dashboard has been reorganized into cards and has pagination
- Recently responded tab is also organized into cards
- Business submissions has been paginated and submissions are sorted by most recent submission date
- UI changes like centering category selection and the artist three tabs' appearance
- Search bar to make pagination easier for user was not completed, you can go to a page by art title

Work completion rate

The total number of user stories completed during the prior sprint was 6. As a team, we spent 80 ideal hours working on our tasks. In total, we spent our time working on our tasks across 12 days. We completed around half a user story a day and worked on average 1.5 hours a day. Our cumulative progress has been 80 hours over the course of 12 days, which comes out to 1.5 hours per day per person.
